Combat dry air

We breathe approximately 20,000 times each day, representing a daily requirement of **12,000 litres of air**. Quality of the air we inhale has a direct impact on our well-being: **air that is too humid** can lead to **health problems** (allergies, asthma, etc.), whereas **air that is too dry**, especially in winter, **dries out our mucous membranes and skin**, promotes fatigue and a feeling of discomfort, as well as increases air pollution.

Doctors and specialists agree that **an optimum relative humidity level is between 40 and 60%**. Using an air humidifier will restore adequate humidity levels in your home.

Automatic humidification with 3 settings

The H-200C connected indoor air humidifier has **three diffusion modes** and an **integrated humidity sensor** that monitors air quality and automatically adjusts the emission to keep humidity at the desired level. A water level alert tells you when to fill the reservoir. When there is no water left, the humidifier switches off automatically.

Easy filling, easy cleaning

The H-200C humidifier is part of a new generation of ultrasonic humidifiers in which **the reservoir is filled from the top**, by removing its cover. This top-filling, along with the carrying handle, greatly facilitates day-to-day management of the device, whether when filling and emptying the reservoir, or when cleaning it.

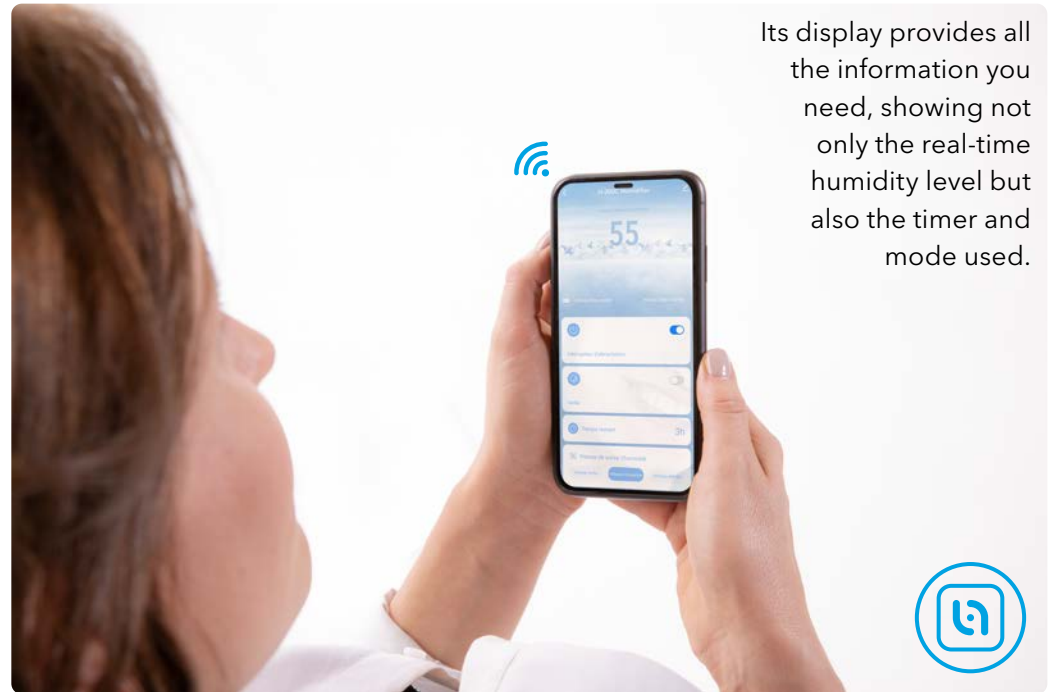

Digital display with real-time information

The H200-C connected indoor air humidifier offers full control: its display provides all the information you need, showing not only the real-time humidity level but also the timer and mode used.

Impressive performance

With a mist emission rate of 300 ml per hour, its 3 diffusion modes and timer function, the H-200C humidifier demonstrates its versatility when it comes to improving the atmosphere of your home. The 2-litre water reservoir runs for up to 20 hours in rooms of up to 30 m², while the self-regulating hygostat maintains an air humidity of between 40 and 90%.

Full control and connectivity

In addition to the display combining all the data, and the touch control panel, you can also check the humidifier via the **Lanaform Connect** app. Easy to download and use, the app has a visual interface to monitor and control the quality of your air from anywhere in the world.

Lanaform Connect

Night mode for quiet nights

To ensure peaceful nights, the connected indoor air humidifier has a night mode that allows quiet operation, whilst ensuring quality air.

Uniform and optimal circulation throughout the room

360-degree diffusion of the H-200C humidifier diffuses humidified air evenly throughout the room. Ultrafine steam is distributed throughout your rooms for optimal humidification. In addition, you can enjoy the benefits of essential oils by putting a few drops directly into the water reservoir. The colour-changing atmospheric light will, for its part, give a touch of decoration to your home.

SMART AIR HUMIDIFIER

LA120126

Characteristics

- Top-filling: easy filling and cleaning
- Humidity control
- LED touch control panel
- Diffusion of essential oils
- Antibacterial zeolite filter
- 3 vapour intensities
- Maximum emission rate: 300 ml/hr
- Timer function (1-12 hrs) or continuous mode
- Adjustable vapour emission orientation
- Reservoir capacity: 2 litres
- Carrying handle included
- Safety system and automatic shut-off
- Variable LED atmospheric light
- Night mode: humidifies the air while you sleep at reduced intensity
- "Lanaform Connect" app included: air quality checking at home and away at a glance
- Suitable for rooms up to 25m²
- Elegant design
